SUBJECT: Postdoctoral Fellow Opening

We invite applications for one Postdoctoral Scholar position specializing in signal processing for radar applications. We are interested in candidates with a strong background in the development of efficient signal processing algorithms and demonstrated experience in applying machine learning techniques. The candidate is expected to contribute to the development of algorithms for processing frequency-modulated continuous-wave (FMCW) radar data. The applications can include imaging, target identification, and other classifications.

The candidate should be familiar with programming languages such as MATLAB or Python and have a strong signal processing and machine learning background.

Applications including a current resume and names of at least three references should be sent (preferably by emailed pdf files) to:
